OUTLINES OF SOCIAL ECONOMY.

To promote well-being is the object of all science.

Wealth, as a means of well-being, is the especial subject of economic science, or of the science of social economy.

And in the whole range of economic science no single truth stands out more indisputable and more important than this:—

“Industry, skill, and economy, are essential to the production of wealth, and parental forethought is no less essential to such a distribution of wealth as will conduce to general well-being.”

BY WILLIAM ELLIS.

Third Edition, Enlarged.
